6. Electrical Specification

6.1 Power On/Off Sequence

This IC is a high-voltage EPD source driver, so it may be damaged by a large current flow if an incorrect power sequence is used.

Connecting the drive powers, [VNEG, VGL] and [VPOS, VGH] after the logical power, VCC, is the recommended sequence.

When shutting off the power, shut off the drive power and then the logic system or turn off all powers simultaneously.

Note: The minimum time is 12 μ s between “OE goes LOW” and “VPOS and VNEG power OFF”

6.2 AC Characteristics

9. Handling, Safety and Environment Requirements

Warning

The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.

Caution

The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components. Disassembling the display module.

Disassembling the display module can cause permanent damage and invalidates the warranty agreements.

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.
